

TECHNOLOGY GROUP PLC

Graduate Careers

APC Technology Group

Specialist electronic components and systems delivered with technical expertise

APC is a design-in distributor of specialist electronic components, products and systems.

Established in 1982, we have over 40 years' experience working with leading global component and technology manufacturers and prominent UK organisations within the defence, aerospace, logistics, real estate, education manufacturing and industrial sectors.

APC is a vital link between world-class manufacturers and the UK marketplace; providing the specification and distribution of non-commodity products that require a design-in approach.

We operate in specialist teams, each with a focus on specific technologies and/or markets, including:

- High reliability components • RF and microwave components
- Embedded computing and connected products • Lighting and smart building technologies
- Time and frequency synchronisation systems • Infection control products
- Test and measurement equipment • Specialist cable and connector solutions

UK portal for global manufacturers

APC represents a wide range of market-leading manufacturers, often on an exclusive basis in the UK, including:

Seiko Instruments GmbH

With offices around the UK

Hertfordshire | Kent | Lincoln | Middlesex | West Sussex

Graduate careers at APC

Through our graduate scheme we are able to develop our Product Managers, Account Managers and Sales Managers of the future within our RF and microwave, high reliability components, lighting and IoT teams.

Our graduate recruits benefit from:

- A structured development scheme that supports your career progression.
- Ongoing training, mentoring and coaching with experienced technical and sales professionals.
- Opportunities to work with our overseas manufacturers, including on-site training in US and Europe.
- Opportunities to work with our main UK customers to develop key accounts.

"We have long standing, trusted relationships with some of the best known organisations in aerospace, engineering, manufacturing and defence. We achieve this by employing talented, committed and entrepreneurial individuals and nurturing their careers within our company. Our mentoring and training schemes develop our next generation of managers, through product training placements in America with our manufacturing partners, to attendance at global trade shows and plenty of client interaction. We are an inclusive employer and strive to recruit, retain and inspire the best people from the widest talent pool. We encourage and welcome applications from all sections of society and are happy to discuss any arrangements required to support your application."

Senga Warman, Group HR Manager

Case studies:

Powering Exomars

APC worked with British technology company QinetiQ to supply power supply modules for the ExoMars Trace Gas Orbiter.

The Lander, a test bed for technologies being used in future space programmes, features hybrid isolated power supplies and filters, designed in and supplied by APC. These products were specified for their high reliability and ability to withstand the mission's radiation levels and harsh operating environment.

New IP production studio

APC worked with technology partner Meinberg to supply time synchronisation equipment for Sony's new IP Live production studio at Pinewood Studios.

Sony's new studio demonstrates the full IP ecosystem, acting as a training centre and testbed for third party interoperability whilst retaining Sony's strong heritage already established at Pinewood Studios.

Structured development schemes to support career progression

Ongoing training, with experienced technical and sales professionals

Opportunities to work with our overseas manufacturers, including on-site training in America and Europe

Opportunities to work with our customers in:

Aerospace | Broadcast | Defence | IT | Manufacturing
Real Estate | Robotics | Telecommunications | Transport

“Working with APC has presented multiple opportunities for growth, and the ability to work within nationally known companies to solve problems within their critical environments.

As industries evolve, I have been able to directly advise national companies on new technologies and solutions, which has been a huge privilege.”

Rob Skinner
HND Electronic Engineering
Lincoln

“APC has customers in almost every vertical sector and can source any product to meet customer requirements.

This provides a great opportunity for technical people who are motivated and committed to finding solutions for customer applications. I’ve been to some amazing customer sites and each day is unique.”

Syed Naqvi
BEng Electrical & Digital Comms
MBA Business Administration
