

Specialist Electronic Components and Systems **Space Capabilities**

40 years' expertise as an AS9120 accredited distributor for over 100 specialist equipment manufacturers, meeting the demands of modern space applications.

APC partners with leading manufacturers from around the world to offer the latest technologies for mission-critical success in space flight, outer space, NewSpace and ground station applications. Our team of experts are available to offer technical advice and guidance along with access to the right qualified parts to ensure mission success in the harshest of environments.

Qualified parts suitable for a variety of space applications

- Space
- NewSpace
- Up and Downstream projects
- AI and on-board high-level data processing
- Power control, protection and distribution systems
- Communications
- Radiation simulation and testing

All of the technologies and components you need in one place

Through our global network of leading manufacturers, we have a vast range of specialist technologies, electronic components and complimentary services.

See all of the products and services we offer online, with detailed specifications and access to the latest data sheets.
